ADDENDA

2.1 Site Location and History

Koppers files on the plant site at South Cavalcade Street, Houston, Texas, were consolidated into a repository for information in the Previously Operated Properties Section of Environmental Resources, 1928 Koppers Building, Pittsburgh, Pennsylvania. The consolidation of information was initiated within seven days of March 28, as required.

The files located and information contained in the files are as follows:

- A. Collingsworth - State Correspondence 84
A general file containing correspondence with EPA, Texas Department of Water Resources, Consultants, and interoffice communication.
- B. Collingsworth
Copy of "The Treating Record" with a page about Koppers; general correspondence.
- C. Forest Products Group
Collingsworth, Texas Plant
General notes of meetings on site.
- D. Collingsworth - Maps and Yard Layouts
 - 1. Yard Plan - December 1951 - Scale 1" = 100'
 - 2. Color prints and negatives of S. Cavalcade Site.
Date Unknown.
 - 3. Groundwater Monitoring Well Location Map
May 8, 1984 Scale 1" = 100'
- E. S. Cavalcade Consultants
Brochures

G. So. Cavalcade/Texas - Date Order
December 1984 to July 9, 1985

Since March, 1985, three Koppers employees have been interviewed. On April 25, 1985, Mr. Clyde Foster, Plant Manager of the Cross-timbers Plant, Houston, Texas 713-697-3257 and former manager of the South Cavalcade site was interviewed. He could not add anything new to the information already known and included in the Interim Site Characterization Report. Mr. Foster's principal concern was the use of the South Cavalcade name for the Collingsworth Plant, since local people would confuse the name with the North Cavalcade site.

Mr. Dave King, Regional Environmental Manager, North Little Rock Plant, 501-945-4581 was not able to add any new information to that already included.

Mr. Charles Brush, former Project Manager for the site, 412-227-2877 was interviewed for additional information, but he revealed no new significant information.

SUBTASK 1 B
AERIAL PHOTO EVALUATION

The current photograph file includes those listed on the following page. Since no information has been made available through a careful review of Koppers' archives or other available photographs, no overlays have been generated for addenda to the Site Plans or Interim Site Characterization Report.

Most of the current aerial photographs have limited value because of small scales. Existing ASCS historical photo coverage is adequate with enlargements, but no new information has been revealed to complement the existing overlays. Current coverage has been supplied with the site survey map.
